Symbiosis with Environment

In response to environmental problems, which is a global issue, we believe that the continuous efforts of each community are essential. We will hand over the ample nature of Minamiuonuma City to the next generation as well as promote a sustainable recycling society utilizing and maintaining the natural environment in order to cope with global environmental problems together with people all over the world.

We will consider how to save natural resources and energy making the most of the special character of Minamiuonuma City and how to convert to and utilize new energy. Also, we will reinforce monitoring of ground subsidence areas. We will promote utilizing melting snow as well, so that the city does not have to depend on underground water.
