The City Foundation

We will strive to create a safe and pleasant city with a good balance where every citizen enjoys convenience and comfort while considering the environment. Also, we will promote appropriate land use and development of urban areas based on national land use planning and upgrade urban infrastructure to be citizen friendly as well as resistant to disasters and snow.

Regarding traffic, we will put importance on reinforcing the east-west infrastructure, which is behind that of the south-north direction, by repairing roads and encouraging improvement of mass transport systems. We will work to meet the needs of the expansion of urban areas and our aging population. Especially, utilizing the experience of the great Chuetsu earthquake and heavy snowfalls, we will promote a safer and more secure society that is more resistant to disasters.
